## **Safety First...Your Nose KNOWS!!**

Propane gas is the most widely used alternative fuel in the world. It does everything from heat your home to fuel your backyard barbecue. Propane is clean, efficient and safe -- provided you use it properly. But like other fuels, propane is a combustible gas. If you smell gas in your house, camper, RV, workplace or around any gas equipment...

**call 911!**

- Promptly get everyone outside and away from the area.
- Put out all smoking materials and any other open flames.
- Do Not turn on or off light switches, appliances, or thermostats.
- Do Not use the telephone. Call 911 and your propane supplier from a neighbor's. An electric spark could ignite the gas.
- Close all gas tank or cylinder supply valves.
- Stay outside until the problem has been corrected.
